(54) ON-VEHICLE MONITORING DEVICE

(57) Abstract:

PURPOSE: To provide an on-vehicle monitoring device which can perform confirmation of vehicle body side rear vision field in a safe state regardless of the weather.

CONSTITUTION: Video cameras 1L, 1R for monitoring vehicle body right and left rear are provided in a vehicle. Respective video cameras 1L, 1R are respectively connected to field memories 2L, 2R that can output image signals with right and left reversed. Respective field memories 2L, 2R are connected to monitor displays 3L, 3R provided in front of an operation seat.

As a result, images whose right and left position relation is reversed, that is, images that are provided in the case of viewing the rear by means of a door mirror or the like, are projected on displays 3L, 3R.
